WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 77 mm lengths of 30 x 30 x 3 angle; square and deburr the ends.

Flat leg (goes on the plate): two 5.5 mm holes, 12 mm in from its free edge, 17 and 47 mm up from the bottom end.

Upright leg (stands forward): three 6.6 mm holes, measured from the back of the angle (the face on the plate) and up from the bottom end: strut foot 17 back, 14 up; post 18 back, 44 up; post 13.7 back, 67.6 up.

Right and left clips are mirror images: drill the upright legs as a pair clamped back to back so the holes line up.

Fit: flat leg on the plate front, upright leg 80 to 83 mm from the centre line, bottom end 258 mm up the plate; M5 screws from behind.

The post bolts to the outside of the upright leg, the strut to the inside.

Check: the clip sits flat on the plate and its upright leg is square.

FIELDNODE
