WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 181 mm lengths of 20 x 3 mm flat bar.

Round both ends to a 10 mm radius (file to a scribed circle).

Drill 6.6 mm: one hole 10 mm from each end (161.2 mm apart) and a third 24 mm from the lower hole, on the centre line.

Drill the two posts clamped together so the holes match.

Fit: the lower end bolts to the outside of the plate clip with two M6 bolts, which hold the post rigid. The upper end bolts to the high panel clip with one M6 bolt, which is the panel's hinge.

The post leans back 10 degrees from vertical and passes 2 mm in front of the plate's top edge.

Check: hole centres 161 mm and 24 mm apart, within 0.5 mm.
